

Rust Shield™

Your Solution for Iron and Manganese Removal

Say Goodbye to Rust and Odor with Rust Shield™!

Are you tired of dealing with the frustration of rust-colored stains, foul odors, and metallic tastes in your water?

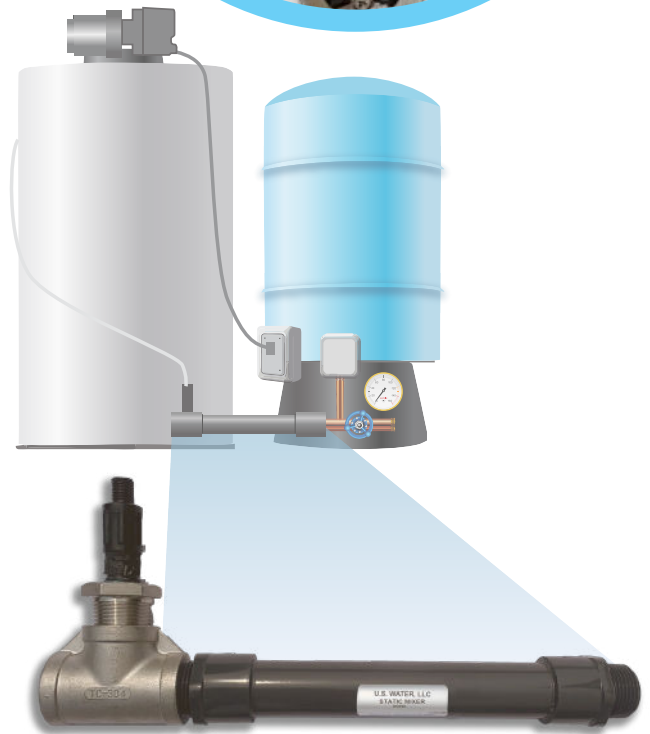

Say goodbye to these common issues with Rust Shield, the innovative treatment system from U.S. Water designed to effectively combat iron and manganese contamination in residential and commercial water supplies.

The Problem: Iron and Manganese Contamination

Iron and manganese are typically harmless in low levels. However, at higher levels, they can affect your water quality, causing reddish-brown stains and unpleasant tastes.

If left untreated, they can also lead to costly damage to your pipes and appliances.

In addition, iron bacteria can form, causing your unpleasant odors, slimy residue, and potential health risks. This results in an unpleasant sulfur (rotten egg) smell in your water.

Rust Shield seamlessly integrates with your existing water treatment system, delivering unparalleled rust protection.

The Solution: Rust Shield Peroxide Treatment System

Rust Shield is your comprehensive solution for tackling iron, manganese, and iron bacteria contamination. Our advanced peroxide treatment system not only efficiently oxidizes iron and manganese but also disrupts the growth and activity of iron bacteria, eliminating sulfur smells and safeguarding your water quality.

How It Works:

Oxidation: Rust Shield delivers a precise dosage of hydrogen peroxide into your water, initiating a chemical reaction that converts soluble ferrous iron and manganese into insoluble ferric iron and manganese dioxide.

Filtration: The oxidized contaminants are then efficiently removed from your water through our state-of-the-art filtration system, leaving you with clean, clear water that's free from staining, odors, and off-flavors.

Experience the Difference with Rust Shield

Say goodbye to the headaches of iron and manganese contamination and hello to clean, great-tasting water with Rust Shield. Learn more about how our innovative peroxide treatment system can transform your water quality and enhance your daily life.

Call for a for a free test and consultation!

Discover peace of mind with U.S. Water's certified water testing facility. From pH levels and mineral content to contaminants and bacteria, we analyze a wide range of conditions to safeguard your health.

Schedule your water test today and take the first step towards healthier, cleaner water for you and your loved ones.
